EDUCATION

BSC Electro-Mechanical Engineering 06/2022 – 06/2025
Addis Ababa Science and Technology University Addis Ababa,
Relevant Courses: Control Systems, Introduction to ML, Introduction to Computer Vision, Object-Oriented Programming with Python, Embedded Systems, Introduction to Robotics, Fundamentals of Electrical Circuits Ethiopia

Full stack development 11/2024 – 06/2025
Evangadi Networks Addis Ababa,
Relevant course: Front-end dev with React, Back-end with NodeJS, Database with Mysql Ethiopia

UI/UX 02/2024 – 03/2024
Awaqi Addis Ababa,
Relevant course: UI, Wireframing, High fidelity, Prototyping Ethiopia

SKILLS

React js, HTML, CSS, JavaScript, Tailwind CSS, Shadcn, Next js, Node js, REST API, Fetch API, MySQL, Mongo DB, Prisma ORM, Express js, System Analyst, Microsoft Power Platform

PROFESSIONAL EXPERIENCE

IT Analyist 07/2025 – Present
CBE Capital Investment Bank Addis Ababa
Frontend developer
Backend development
Api integration
Graphics design
Microsoft Power automation development

Internship 07/2024 – 09/2024
Berhanena Selam printing enterprise Addis Ababa,
- **Observation**: worked on and observed the maintenance of different printing machines, mainly hydraulic and pneumatic systems Ethiopia
- **Office Operations**: I got real-world experience and have seen how the working office operates.

Internship 06/2024 – 07/2024
EELPA (Ethiopian Electric Light and Power Authority) Addis Ababa,
- **Inspection**: I have participated in the inspection of different power systems, including Transformers, SCADA Ethiopia

- **Fault detection and Data encoding**: I have worked in the detection and maintenance of faulty substations.

PROJECTS

Crop suggestion system using Machine Learning
Technologies used Python with Jupiter Notebook
Develope crop suggestion system using python for Machine learning and Kaggle data set to train the model. The accurecy is above 70% after evaluating by different test data.

Obstacle Detection For AGVs for transport luggage in Airports 01/2025 – 06/2025
Computer Vision
A camera-based obstacle detection and background substaction using MOG2 for AGVs

Design, Modeling, Simulation and Prototyping of automated guided vehicle(AGV) for Airports 09/2024 – 06/2025
Final year Project
- **Prototyping**: worked on transforming the design into a real prototype. using Arduino, a stepper motor, and 3D printed parts
- **Design**: worked as a lead for my team in the process of designing the Prototype with MATLAB-Simulink and Arduino.

Fylo-cloud storage system landing page with react 01/2024 – 03/2024
Front end technologies used HTML, CSS and REACT JS
Design minimalist & responsive landing page with mobile first approach using front end technologies HTML, CSS, JS and REACT JS

Ecoarm 01/2025 – 01/2025
Product branding single page web application
Ecoarm product branding single page web application for modern agricultural farm user interface design implementation for personal project
Technologies used: HTML, CSS, JavaScript

AWARDS

Stride Ethiopia Hackaton 2023 3rd Place Winner 2023
Minister of Science and Innovation

Hack into Bright Hackathon 2023 Participant 2023
COOP & Chapa technologies
